**To whom it may concern**

Schwäbisch Hall, 8<sup>th</sup> July, 2014

**Product Change Notification PCN 2014001**

Dear Madams and Sirs,

This letter is to inform you about an expansion of the ATEX and IECEx approval of our EX heater series CREx 020. With additional tests carried out by LCIE it was possible to increase the operating temperature as follows:

Description of adjustment:

	Heating capacity	Previously	Effective now
Ambient temperature	50W	-40 to +40°C	-40 to +50°C (at T5 (100°C)) -40 to +85°C (at T4 (135°C))
	100W	-40 to +40°C	-40 to +50°C (at T4 (135°C)) -40 to +85°C (at T3 (200°C))

The product itself was not modified for this improvement.

Affected products:                    02010.0-00                    02010.0-01  
    02011.0-00                    02011.0-01

For deliveries of hazardous area heaters to Russia please note the following: GOST R approval for the heaters CREx 020 has expired. Moreover the RTN (ROSTEKHNADZOR) permit in Russia was abolished. The hazardous area heaters CREx 020 have already been submitted for TR Ex certification of the Customs Union (EAC) which replaces RTN.

Further details about the new specification can be found in the data sheets on our website [www.stego.de](http://www.stego.de).

Please forward this letter to the responsible departments within your company. In case of any questions, please feel free to contact us via phone +49 (0) 791 950 580 or by email at [service@stego.de](mailto:service@stego.de).

Best regards

STEGO Elektrotechnik GmbH
